

Need a pellet burner?
BIG in features, SMALL in cost.

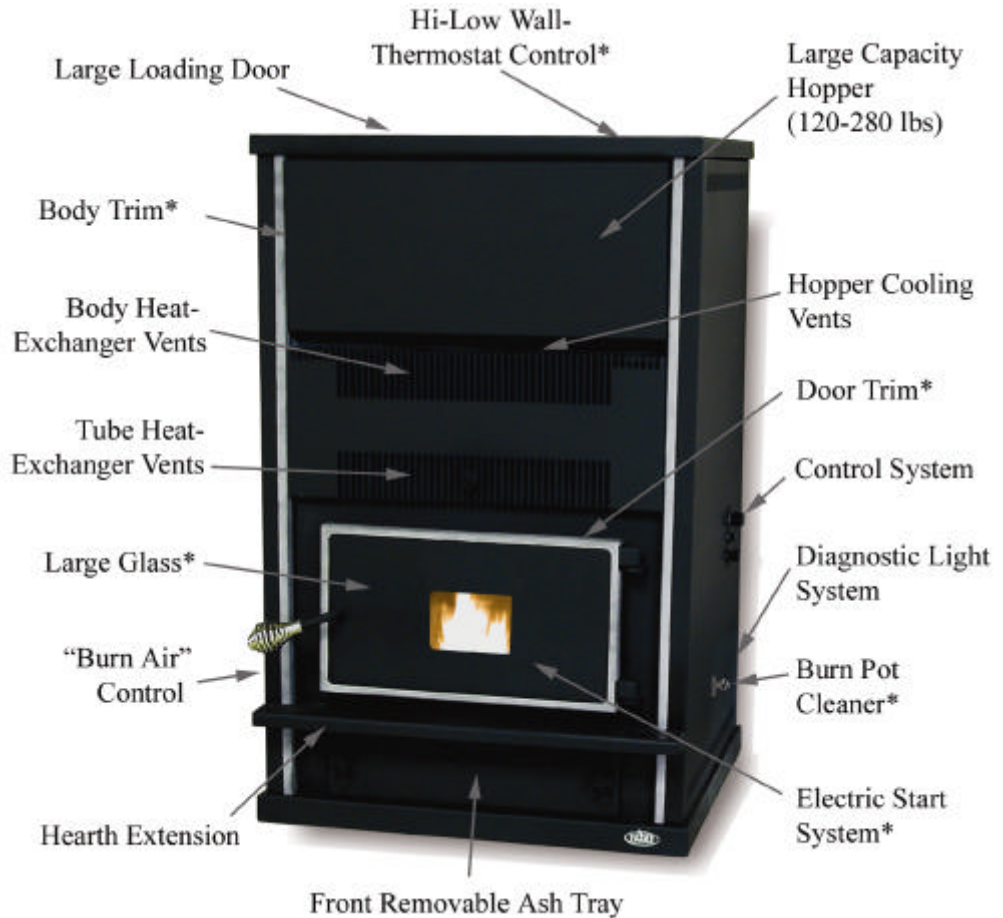

KOZI *Shop Heaters*

KOZI PELLET SHOP HEATER

KOZI Shop Heaters are efficient, easy to use, and operate. They are an economical solution to today's rising heating costs. The KSH Shop Heater can be lit manually or be equipped with an electric start for even more convenience. The burn rate can be adjusted manually or automatically by using the high-low wall-thermostat control. All you need to do is load the hopper with pellet fuel, start the heater and enjoy the warmth of a KOZI. Once the KSH has been started, the pellets will automatically feed at your specified rate, through the auger and into the burn pot. The pellets will then ignite within 5-7 minutes (on electric start models), the flame will become established and begin to warm the heat exchanger tubes. The circulation fan will push cool air through the heat exchanger and transfer the heated air into to the room. The KSH is loaded with standard safety features that ensure safe and reliable operation. With an efficiency rating of 86%, the KSH Pellet Shop Heater is the ideal heater for all of your shop or home heating needs.

***OPTIONAL FEATURES:** Electric Start, Hi-Low Wall Thermostat, Large View Glass, Burn Pot Cleaner, Body and Door Trims Glass Saver™, Fan Speed Control
